

Name SURNAME

I started my software adventure with C++ programming language in 2008. I then started to take interest in web programming language. As a freelancer, I had chances to work with people from all over the world. I became acquainted with different cultures and hence acquired work discipline. I am currently studying Banking and Insurance in MEF University with the partnership of Yapı Kredi Academy, and I am working on the finance sector during my studies. On that end, I developed two new and unique software projects on behalf of Yapı Kredi Bank.
